

MANIKANTA J N

KOLAR (KA) | P: +91 9108985805 | <https://www.linkedin.com/in/manikanta-jn-9a567b373>

EDUCATION

VTU, BELAGAVI

Bachelor of Technology
Artificial Intelligence and Machine Learning
CGPA – 8.02

2024- MAY 2028

GOVERNMENT PU COLLEGE

KOLAR , BENGALURU

Percentage – 87.89

CAREER OBJECTIVE

AI & ML undergraduate with an 8.02 CGPA and hands-on experience building AI-powered web applications using Python, Flask, TensorFlow, OpenCV and SQL. Built and deployed projects involving multilingual NLP, computer vision, REST APIs and AI-assisted learning systems.

PROJECTS

1. SkillBridge – AI-Powered Rural Student Upskilling Platform |

June 2026

- Built an **AI-powered skill development platform** designed to help rural students access industry-relevant courses, learning resources, videos, and notes.
- Developed a **Flask-based backend and RESTful APIs** for user authentication, course management, quizzes, learning resources, and personalized student interactions.
- Implemented an **AI-powered multilingual translation system** to translate course and quiz content into regional languages, improving accessibility for students with limited English proficiency.
- Designed a **centralized learning platform** providing curated educational videos, downloadable notes, topic-wise learning content, and interactive quizzes to support self-paced upskilling.
- Integrated an **AI chatbot/assistant** to help students understand course concepts, resolve learning-related queries, and navigate available resources.
- Developed a **responsive student dashboard** with course tracking, quizzes, learning progress, and multilingual support for an accessible learning experience.

Tech Stack: Python, Flask, SQLite/MySQL, HTML, CSS, JavaScript, REST API, AI/NLP, Translation APIs.

ONCOLENS AI – AI-Powered Early Cancer Detection | Python, Flask, TensorFlow, OpenCV, MySQL

March 2026

- Built an AI-powered medical imaging platform for early cancer detection that accepts body scans (CT, MRI, X-ray) and analyzes images to provide optimal diagnostic solutions for doctors and patients.
- Developed RESTful APIs using Python Flask and integrated deep learning-based image classification models for tumor detection, lesion segmentation, and cancer risk assessment from medical scans.
- Implemented image preprocessing pipelines using OpenCV and TensorFlow for scan enhancement, anomaly detection, and automated report generation with confidence scoring for identified regions.
- Designed a role-based dashboard supporting both doctors and patients, featuring real-time scan analysis, historical patient records, trend visualization, and clinical decision support recommendations.

Technical Skills

Languages: Python, Java, JavaScript, SQL

AI/ML: Machine Learning, Deep Learning, NLP, TensorFlow, OpenCV

Backend: Flask, REST APIs, JWT Authentication, SQLAlchemy

Databases: MySQL, SQLite, Database Design, SQL Joins

Frontend: HTML5, CSS3

Tools: Git, GitHub, VS Code

Certifications & Achievements

- **Hand-on Workshop – IEEE | 2025**
Earned a verified certificate on Next-Gen Security :Attack Simulation and analysis with Modern tools
- **Getting Started with Generative AI – IBM | 2026**
Earned a verified digital credential covering foundational concepts and applications of Generative AI.
- **Bharatiya Antariksh Hackathon 2026 – Certificate of Participation – ISRO & Hack2skill | 2026**
Participated and successfully submitted an innovative solution addressing real-world space challenges as part of the national-level hackathon.
Certificate ID: 2026H2S06BAH-P07647
